### PRODUCT USER GUIDE

#### **Product Overview**

The State101A data logger monitors and records the occurrence, duration and status of predetermined events by measuring changes in voltage. Typically connected to a relay or switch, this data logger features a removable screw terminal block to easily disconnect and retrieve the logger for data download without disrupting wiring connectivity.

The State101A is a great solution for a variety of industries and applications including HVAC studies to monitor heating and cooling systems for efficiency or the monitoring of gas, water or electric pumps. This device replaces costly strip chart recorders and is also used in TTL high/low monitoring, general status recording and security systems as well.

#### Installation Guide

#### **Installing the Interface Cable**

IFC200 (sold separately) — Insert the device into a USB port. The drivers will install automatically.

#### **Installing the Software**

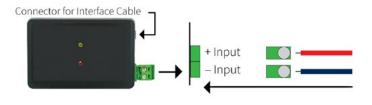

The Software can be downloaded from the MadgeTech website at **madgetech.com**. Follow the instructions provided in the Installation Wizard. Compatible with Standard Software version 2.03.06 or later and Secure Software version 4.1.3.0 or later.

#### Wiring the Data Logger

#### **Wiring Options**

The State101A has a two-position removable screw terminal connection. The State101A accepts 2-wire configurations.

*Warning:* Note the polarity instructions. Do not attach wires to the wrong terminals.

#### **Device Operation**

#### **Connecting and Starting the Data Logger**

- 1. Once the software is installed and running, plug the interface cable into the data logger.
- 2. Connect the USB end of the interface cable into an open USB port on the computer.
- 3. The device will appear in the Connected Devices list. Highlight the desired data logger.
- 4. For most applications, select **Custom Start** from the menu bar and choose the desired start method, reading rate and other parameters appropriate for the data logging application and click **Start**.
  - Quick Start applies the most recent custom start options
  - **Batch Start** is used for managing multiple loggers at once
  - **Real Time Start** stores the dataset as it records while connected to the logger
- The status of the device will change to Running, Waiting to Start or Waiting to Manual Start, depending upon your start method.
- 6. Disconnect the data logger from the interface cable and place it in the environment to measure.

**Note:** The device will stop recording data when the end of memory is reached or the device is stopped. At this point the device cannot be restarted until it has been re-armed by the computer.

#### Downloading Data from a Data Logger

- 1. Connect the logger to the interface cable.
- 2. Highlight the data logger in the Connected Devices list. Click **Stop** on the menu bar.
- 3. Once the data logger is stopped, with the logger highlighted, click **Download**. You will be prompted to name your report.
- 4. Downloading will offload and save all the recorded data to the PC.

### PRODUCT USER GUIDE

#### **Engineering Units**

Engineering units are used to convert one measurement reading to another. The MadgeTech software allows for software level Engineering Units (conversion applied to data after download). Certain devices have device level Engineering Units, which upon download automatically appear in the chosen unit of measure. Please refer to the Engineering Units Video on **madgetech.com/resources/** videos for step-by-step setup instructions.

#### **Set Password**

To password protect the device so that others cannot start, stop or reset the device:

- 1. In the **Connected Devices** panel, click the device desired.
- 2. On the **Device** Tab, in the **Information** Group, click **Properties**. Or, right-click the device and select **Properties** in the context menu.
- 3. On the General Tab, click Set Password.
- 4. Enter and confirm the password in the box that appears, then select **OK**.

#### **LED Indicators**

**Green LED blinks:** 10 seconds to indicate logging and 15 seconds to indicate delay start mode.

**Red LED blinks:** 10 seconds to indicate low battery and/or memory and 1 second to indicate an alarm condition.

#### **Multiple Start/Stop Mode Activation**

- To start device: Press and hold the pushbutton for 5 seconds, the green LED will flash during this time. The device has started logging.
- To stop the device: Press and hold the pushbutton for 5 seconds, the red LED will flash during the this time. The device has stopped logging.

#### Device Maintenance

#### **Battery Replacement**

### Materials: Small Phillips Head Screwdriver and a Replacement Battery (LTC-7PN)

- 1. Puncture the center of the back label with the screw driver and unscrew the enclosure.
- 2. Remove the battery by pulling it perpendicular to the circuit board.
- 3. Insert the new battery into the terminals and verify it is secure.
- 4. Screw the enclosure back together securely.

*Note:* Be sure not to over tighten the screws or strip the threads.

#### Recalibration

The State101A has a digital input signal and cannot be calibrated. A certificate of conformance can be provided.

### NEED HELP?

### Product Support & Troubleshooting:

- Visit our Resources online at madgetech.com/resources.
- Contact our friendly Customer Support Team at 01929 459 459 or support@wpls.co.uk

#### MadgeTech 4 Software Support:

- Refer to the built-in help section of the MadgeTech 4 Software.
- Download the MadgeTech 4 Software Manual at **madgetech.com**.
- Contact our friendly Customer Support Team at 01929 459 459 or support@wpls.co.uk
